

Explore & Play

LEDON

EXPLORE

Explore & Play

Any explorers have done it – they travelled around the world, fought their way through the jungle, hid away, got discovered and escaped again. Now it is the children's turn. There is a treasure hidden somewhere, and you've got to get down on your tummy, to crawl, jump up, leap, run and swing from one branch to the other. Your friends are with you – but so are your enemies. You must be alert! And you need to trust your own strength, to challenge the impossible. You mustn't be afraid of what might be waiting around the next waterfall. On your quest of the Holy Grail, you will have to pass a number of ordeals. It's a matter of life or death. Nature and its symbols make a perfect framework for the children's imagination.

Ledon Explore is a series that makes you want to discover, play and learn – in the middle of nature. We are in a jungle where anything can happen.

Huts, rope bridges, lianas and wildlife are the setting – just get ready and get going!

LEDON®
EXPLORE

Ledon's play structures support children's natural physical, cognitive, creative and social development.

Challenges for children of all ages...

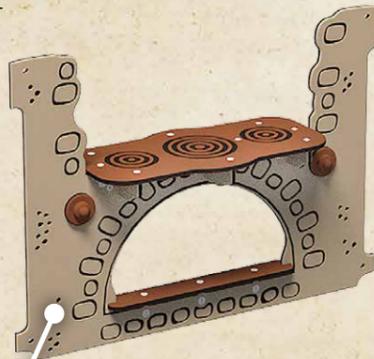

Shapes and movement

Side panels with different activities are very popular among the youngest. They train their fine motor skills when moving the animals from one end to the other.

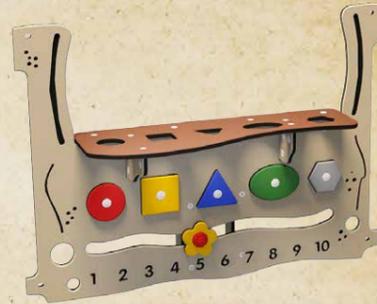

Stove

Especially the youngest are insatiable when it gets to playing with pots and pans and lids. Role play supports not only their language development but also their ability to distinguish between imagination and reality.

Kiosk

The kiosk invites to role plays during which children learn to negotiate, to come to agreements and to deal with minor conflicts. The kiosk allows the children to play with shapes, colours and their first numbers.

Kitchen

What are we having for dinner, who stirs in the pots – and when are we going to eat? The kitchen is a natural place for role play focussing on negotiations and has always been a big hit with children of all ages.

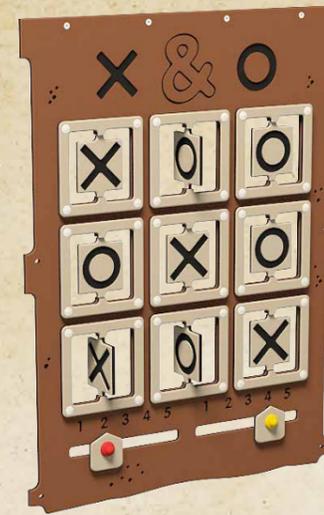

Jeep

There are new adventures waiting when the children take off for an exciting trip in the jeep, whisking over bumpy, windy roads through the woods. You can go for really wild rides through exciting imaginative areas. There are a lot of activities with movable parts that help strengthen motor skills and imagination.

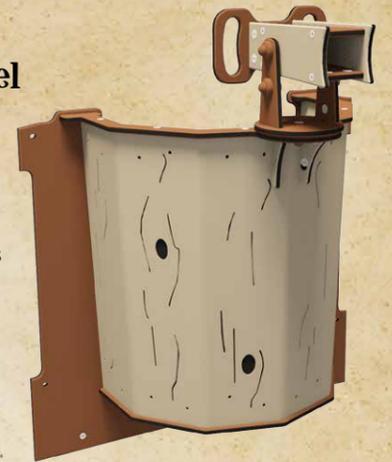

Tic Tac Toe

Tic Tac Toe is one of the most widespread games around the world and is now becoming part of our playgrounds. The bricks are made of polyethylene, their rounded edges make them pleasant to touch. At the bottom of the board, there is a scoring scale – who is first to win five games?

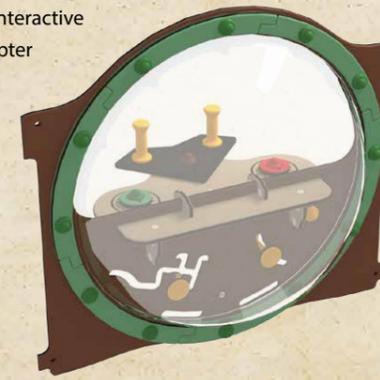

Lookout barrel

Anything in sight? The lookout barrel's skidproof floor and moveable telescope invite to countless hours of roleplay.

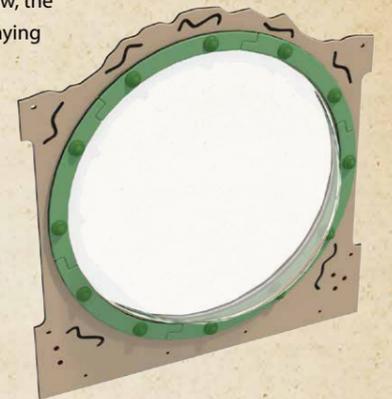

Helicopter

Up, up and away to explore the thick jungle from above! The children are totally in control of the new adventure, thanks to an interactive cockpit. The helicopter wall offers many activities to strengthen both fine motor skills and imagination, it has an accelerator, a gearshift and a movable pilot stick.

Wall with dome

Fly through the air or dive under the sea. With its panoramic view, the dome is perfect for playing helicopter, submarine or other exciting things. The dome is made of shatterproof polycarbonate to make sure children confidently can continue their fanciful play.

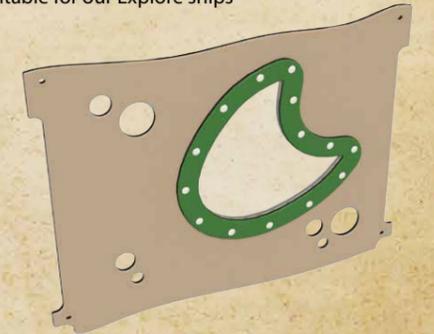

Wall of senses with a window

Bees are swarming and the ladybird buzzes around. The Wall of Senses offers plenty of fun activities with lots of movable parts that can turn around, go up and down or back and forth. There are enough activities for many children, and playing with this Wall of Senses will strengthen social and fine motor skills as well as stimulate the children's sense of touch.

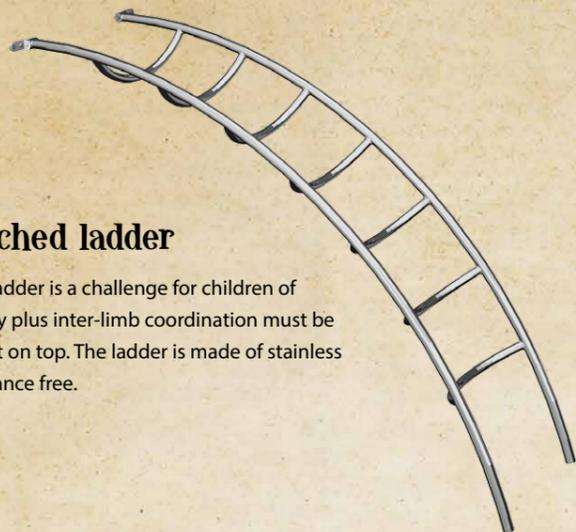

Wall with a window

"Who is on the other side?" – The sea is filled with funny fish and the air with rare birds. Let the children's imagination run wild! A wall with a window made of hard wearing, shatterproof polycarbonate suitable for our Explore ships and other things.

Horizontal arched ladder

The horizontal arched ladder is a challenge for children of all ages. The whole body plus inter-limb coordination must be activated in order to get on top. The ladder is made of stainless steel and thus maintenance free.

Rope ladder

The rope ladder is a simple access option for your play structure – and since it sways a little, it challenges the children's sense of balance and coordination skills.

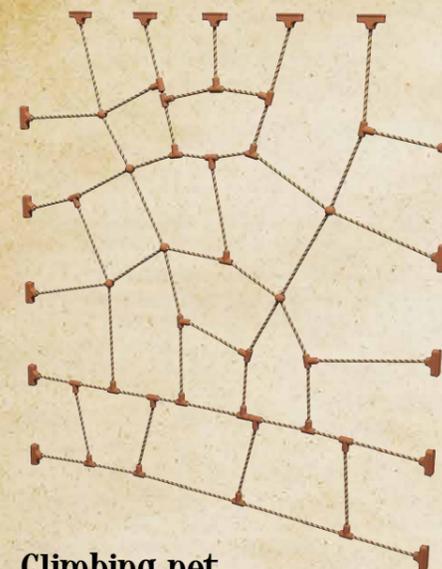

Vertical arched ladder

The vertical arched ladder was designed for older children. Climbing the ladder will train their coordination skills and sense of balance. The ladder is made of stainless steel and thus maintenance free.

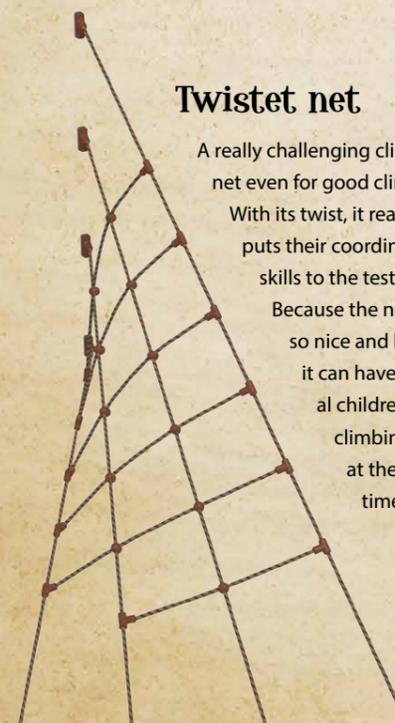

Horizontal climbing nets

Horizontal climbing nets are meant to be a place for the children to hang around and relax together with their friends. The nets can also be part of a big 'the floor is made of lava' trail.

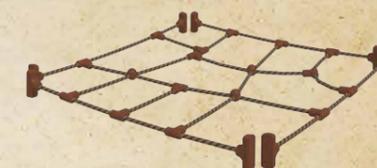

Climbing net

Working your way through a climbing net strengthens both eye-hand and inter-limb coordination. These skills are vital for learning to read and write.

Twistet net

A really challenging climbing net even for good climbers! With its twist, it really puts their coordination skills to the test. Because the net is so nice and long, it can have several children climbing in it at the same time.

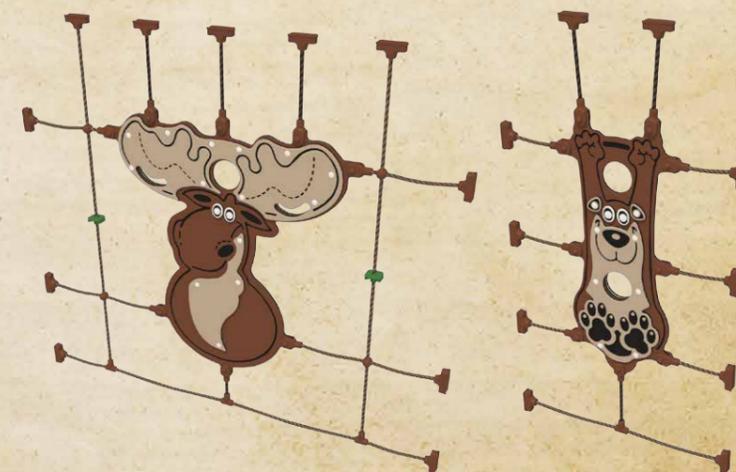

Spider's web

You can scuttle around like a spider, wriggle like a little worm or hold onto it like a lazy koala. No matter what, the spider's web is a good place to have a good time with your friends.

Climbing net with figures

Our climbing nets with figures are very popular among the youngest climbers. The figures have got holes to hold on to on your way. Moving through climbing nets strengthens the children's eye-hand and inter-limb coordination. These skills are vital for learning to read and write.

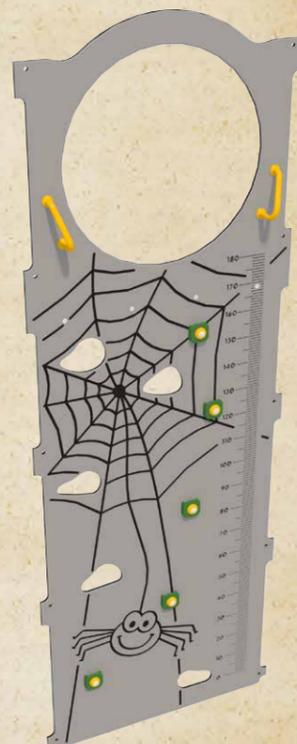

Gangway

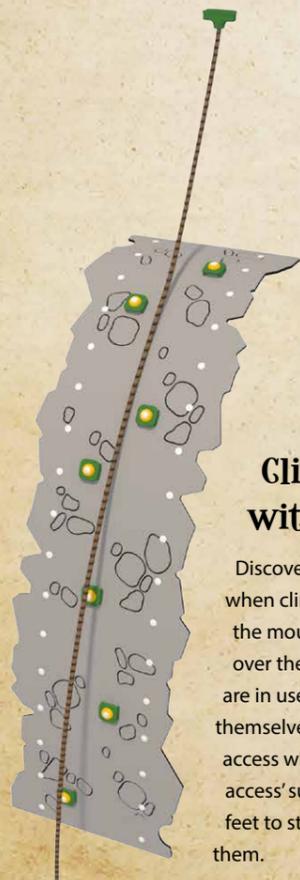

Come in – or out, if you wish. This is for kids tall and small. The gangway sports skidproof steps as well as round edges to make it safe for everyone to get to the top.

**Climbing wall**

Climbing walls are for children from the age of 4. Climbing up the wall stimulates gross motor skills, sense of balance and coordination skills.

**Spider climbing wall**

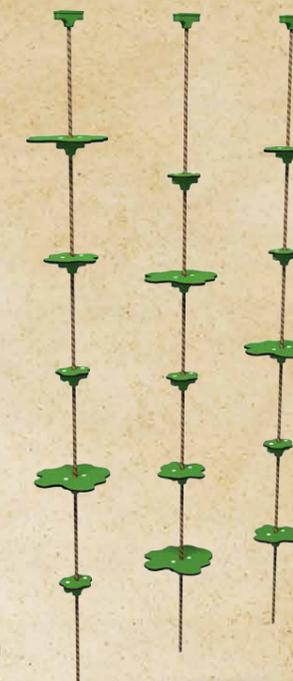

The treasure has been hidden in the top cave for centuries. The climbing wall is fitted with holes for the feet and climbing stones, so you can climb up differently every time. How high can you climb? The measure on the wall will tell! An exciting item that trains both strength and hand-eye-coordination.

**Climbing access with rope**

Discover your inner mountaineer when climbing this steep cliff. From the mountain top, you can see over the whole jungle! All muscles are in use when the children pull themselves up this challenging access with all their might. The access' surface helps hands and feet to stay where you place them.

**Leaf climbing access**

There are trees and shrubs of all sizes in the jungle. But the deeper you get into it, where no man has ever been before, the bigger leaves you will find! There are placed some few climbing stones on this arched leaf, enabling both small and bigger children to climb up in a new way every time they try.

**Lianas**

The vertical lianas are a pretty tough climbing challenge. Especially sense of balance and coordination skills are trained by clambering the lianas.

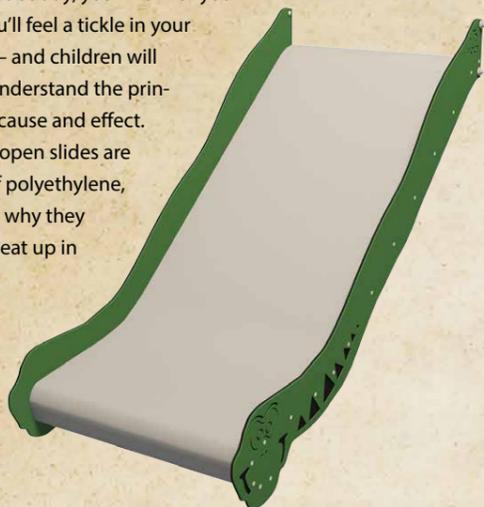

**Monkey bar**

The monkey bar is meant for older children who will have to move their limbs crosswise while lifting their own weight! A big challenge!

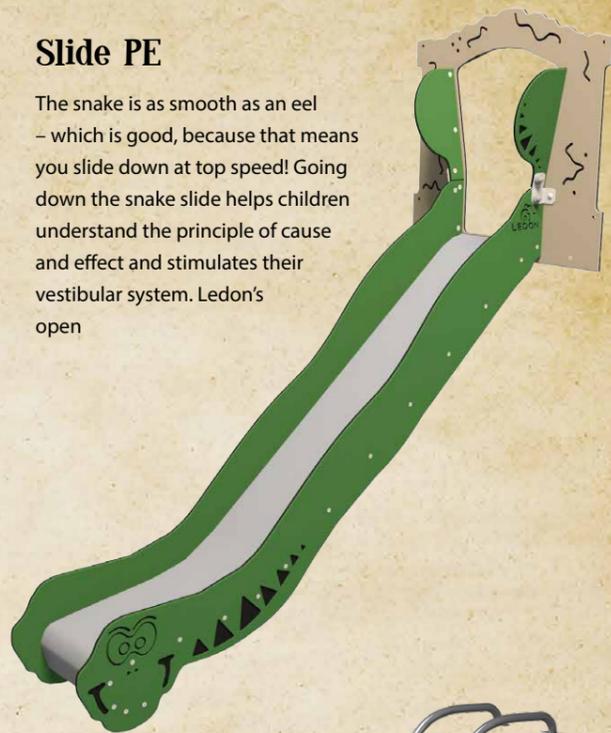

Wide slide PE

The wide snake slide is wide enough for two. So you can slide down together with your best buddy, your mum or your dad. You'll feel a tickle in your tummy – and children will better understand the principle of cause and effect. Ledon's open slides are made of polyethylene, which is why they hardly heat up in the sun.

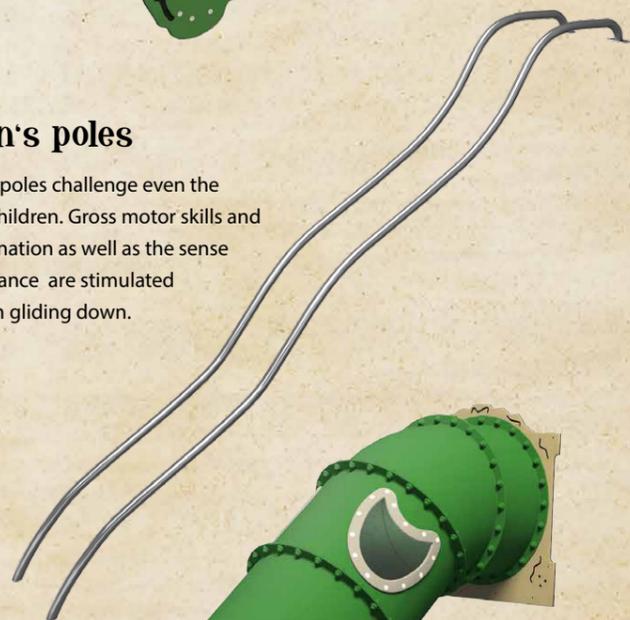

Slide PE

The snake is as smooth as an eel – which is good, because that means you slide down at top speed! Going down the snake slide helps children understand the principle of cause and effect and stimulates their vestibular system. Ledon's open slides are made of polyethylene, which is why they hardly heat up in the sun.

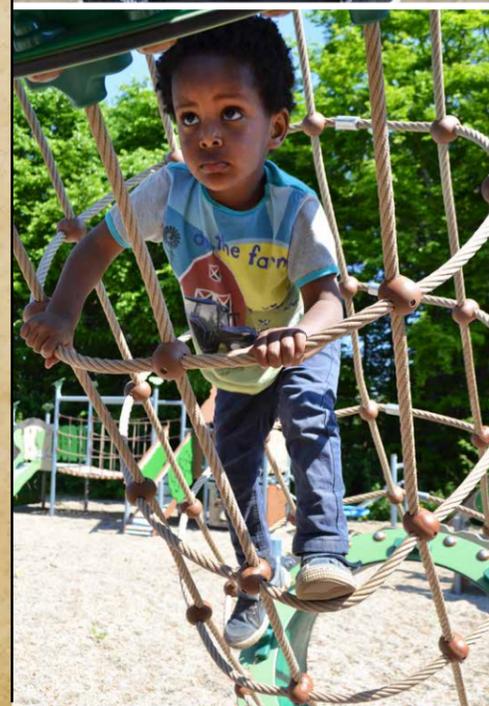

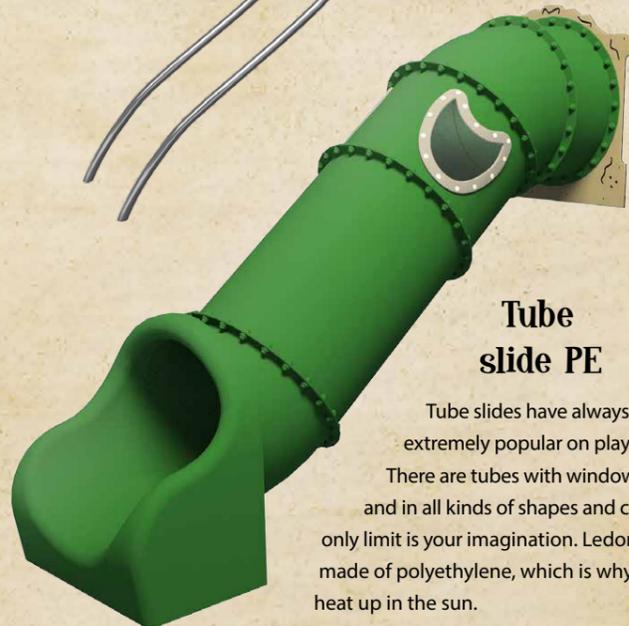

Fireman's poles

Fireman's poles challenge even the oldest children. Gross motor skills and coordination as well as the sense of balance are stimulated when gliding down.

Tube slide PE

Tube slides have always been extremely popular on playgrounds. There are tubes with windows in them and in all kinds of shapes and colours – the only limit is your imagination. Ledon's tubes are made of polyethylene, which is why they hardly heat up in the sun.

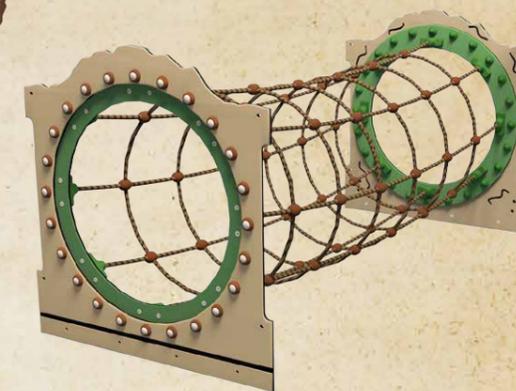

Jungle bridge

Our jungle bridge is fun and challenge at the same time. The sense of balance and coordination skills are trained when chasing through the whole structure.

Rope tunnel horizontal

Our horizontal rope tunnel is popular with children from 5 years. There are plenty of ways to crawl or hang out in the rope tunnel. The only limit is your imagination.

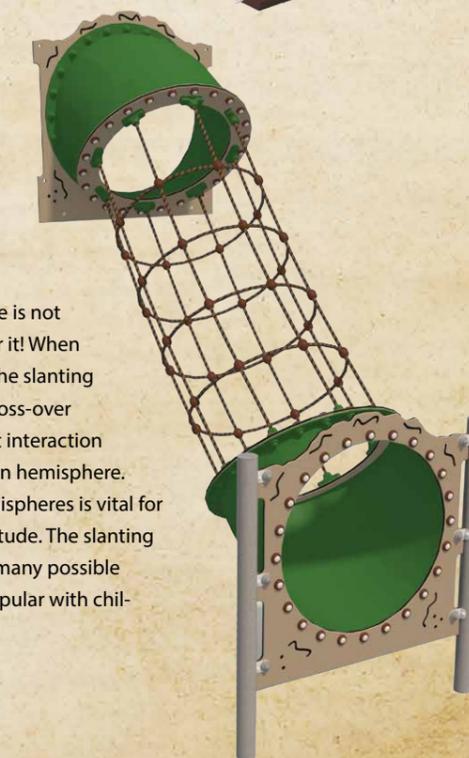

Rope bridge

You'll be on swaying grounds on our rope bridge. Crossing the bridge stimulates the children's vestibular system and their sense of balance.

Slanting rope tunnel

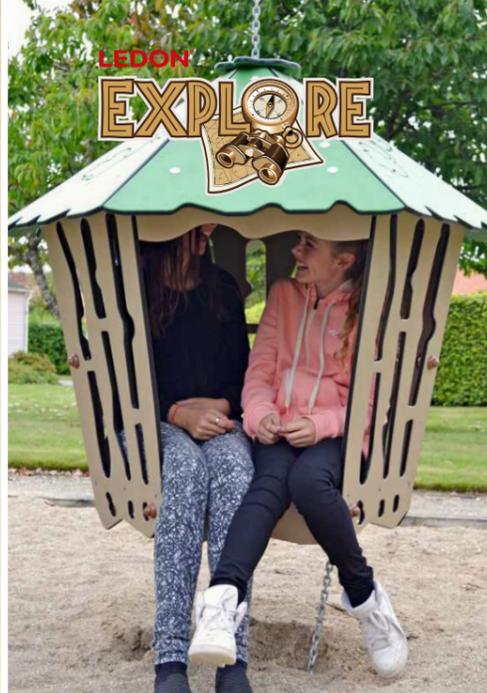

The way through the jungle is not easy. You've got to work for it! When climbing up and down in the slanting rope tunnel, children do cross-over movements which support interaction between right and left brain hemisphere. This interaction of the hemispheres is vital for the children's learning aptitude. The slanting rope tunnel is only one of many possible structure accesses. Very popular with children of all ages.

Challenges for children of all ages...

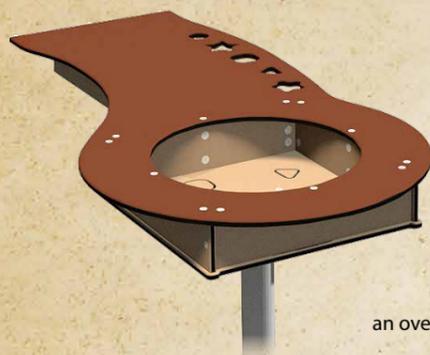

Jungle hut

No matter what age – children love caves. This is where they can talk and tell each other secrets. Which is why the jungle hut is bound to be a hit in your Ledon Explore world. The hut is cozy and moves!

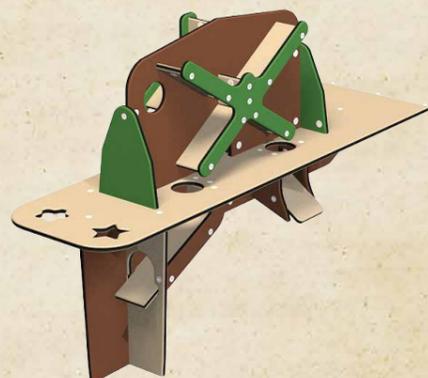

Splash table

Sand and water have always been very popular with children. At the splash table, they can build beautiful sand castles and train their fine motor skills at the same time. The splash table comes with a plug and an overflow, which makes it easy to keep it clean.

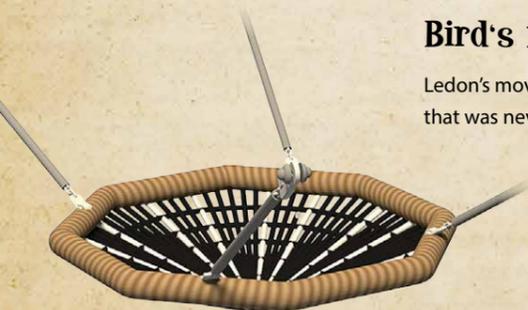

Sand machine

Children can play with and cooperate around the sand machine for hours. The sand machine comes with activities on either side. It is very popular with institutions.

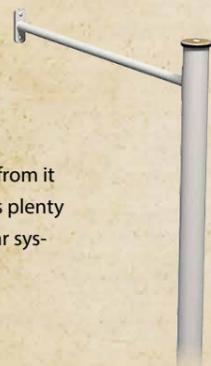

Bird's nest

Ledon's moving bird's nest is a new, innovative activity that was never seen in this context on a playground before. The bird's nest is the perfect cozy corner where cock-and-bull-stories are told and joint laughter can ignite new friendships.

Somersault bar

You can snake around it, spin around it or hang from it with your head down. The somersault bar allows plenty of artistic exercises that stimulate both vestibular system and sense of balance.

Challenges for children of all ages...

Prow

You can feel the waves crush against the prow while the Ledon Explore ship sails towards the horizon in the quest of new adventures, always accompanied by the parrot on the left and the anchor on the right side. The figurehead is some mysterious fabulous creature meant to ignite the children's imagination. The creature radiates confidence and makes the ship look more authentic.

Wall with rudder

Welcome aboard the Ledon Explore ship! Set sail and find new adventures out there on the open sea. A merry monkey will keep you company, and with its movable parts and a proper, turning wheel, this ship is an adventure in itself.

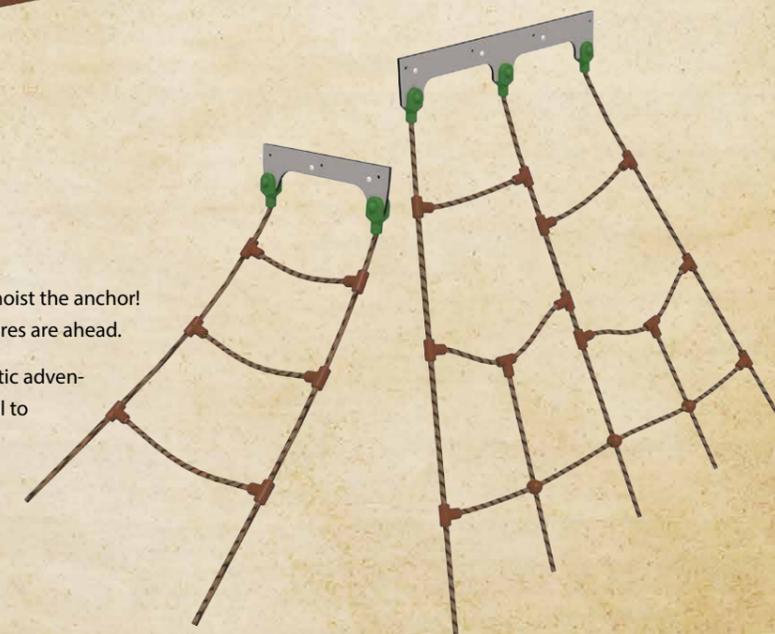

Rope ladder climbing access for ships

Climb aboard the Ledon Explore ship, cast off and hoist the anchor! There is enough wind in the sails, and new adventures are ahead.

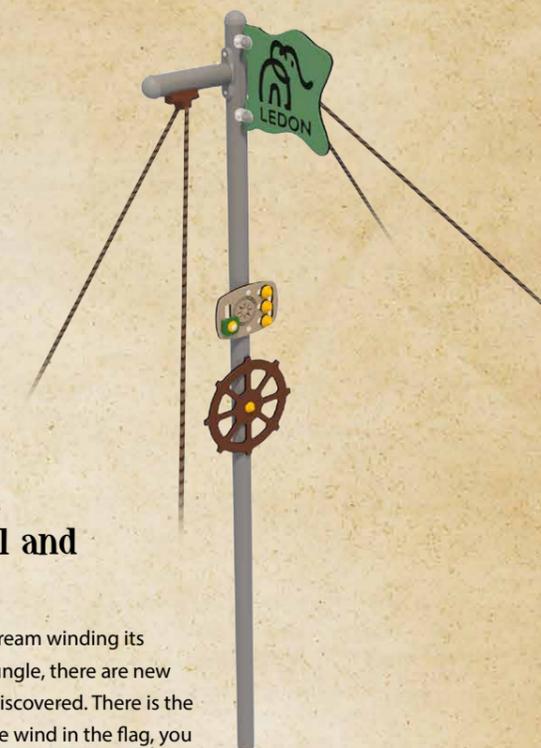

The rope ladder climbing access adds to an authentic adventure experience on our ships, whenever they set sail to explore new countries and continents.

A challenging climbing net for the Explore ship, with differently shaped mesh that challenges and trains both balance and coordination skills.

Mast with flag, wheel and compass

Along the foggy stream winding its way through the jungle, there are new adventures to be discovered. There is the treasure! With some wind in the flag, you can turn the wheel and get the boat on the right course – assisted by the compass. These are perfect accessories for any Explore ship.

Materials

Polyethylene

All polyethylene boards are especially developed for Ledon, aiming at getting the best possible quality. The material is maintenance-free and extremely hard-wearing – even scratches and fissures do not reduce its durability.

The boards are non-toxic and comply with EN71 (safety requirements for toys) as well as with the requirements of the United States Food & Drug Administration (FDA) as outlined in the CFR (Code of Federal Regulations) Title 21, Section 177.1520.

Our polyethylene boards are available in 11 different colours with a black core. The boards are UV-stabilized regarding both shape and colour. We give 5 years guarantee on considerable fading.

Nylon parts

All handles are made of nylon (PA6), have round edges and are shaped to offer good grip. This reduces eye and dental injuries. Fingers won't freeze to them. All parts are UV-stabilized regarding shape and colour. They are impact-proof from -40 °C to +110 °C. All parts are maintenance-free.

Skid-proof polyethylene

Our skid-proof polyethylene board is coated with a 3 mm rubber layer. Being a gimmick from the car industry, it also provides our playground items with extremely durable surfaces.

Nut covers

All nuts and bolt ends are capped with nut covers, protecting children from sharp edges and the playground items from unwanted demounting.

Screws and bolts

Most of our playground items are assembled with either bolts, screws or specially designed aluminium bushes. All screws and bolts are made of stainless or galvanized steel.

Metal pipes

All metal pipes and posts are hot-dip galvanized to avoid rust. Metal pipes make a very stable construction and do not deform.

Fittings

All fittings have got round edges and are hot-dip galvanized.

Ropes and net

All ropes and nets are made of six strands with eight steel wires each, that is a total of 48 steel wires protecting against vandalism.

The rope can take a peak load up to 4,500 kg and does not brittle nor get slack. All climbing nets are put together with joints of impact-proof nylon (PA6).

Ledon's warranties

- your assurance of quality and durability

20 years warranty

- Boards of HDPE
- Steel posts and top beams
- Floor beams and steel frames
- Other galvanized bearing parts
- Components of stainless steel

10 years warranty

- Other galvanized fittings
- Components of spray cast PE and PA6
- Cedar wood and Robinia
- Larch wood not touching the ground

5 years warranty

- Painted metal parts
- Springs
- Ropes
- See-through domes and windows made of polycarbonate

2 years warranty

- Movable plastic and metal parts

Ledon's warranties cover material faults in the stated length of time for the respective material. The warranty is only valid if the product was installed correctly and has been maintained in accordance with Ledon's assembly and maintenance instructions.

The warranty does not cover damage caused by ordinary wear and tear, negligence, faulty maintenance, vandalism and abuse. Furthermore the warranty does not cover if original Ledon parts are used with unoriginal parts.

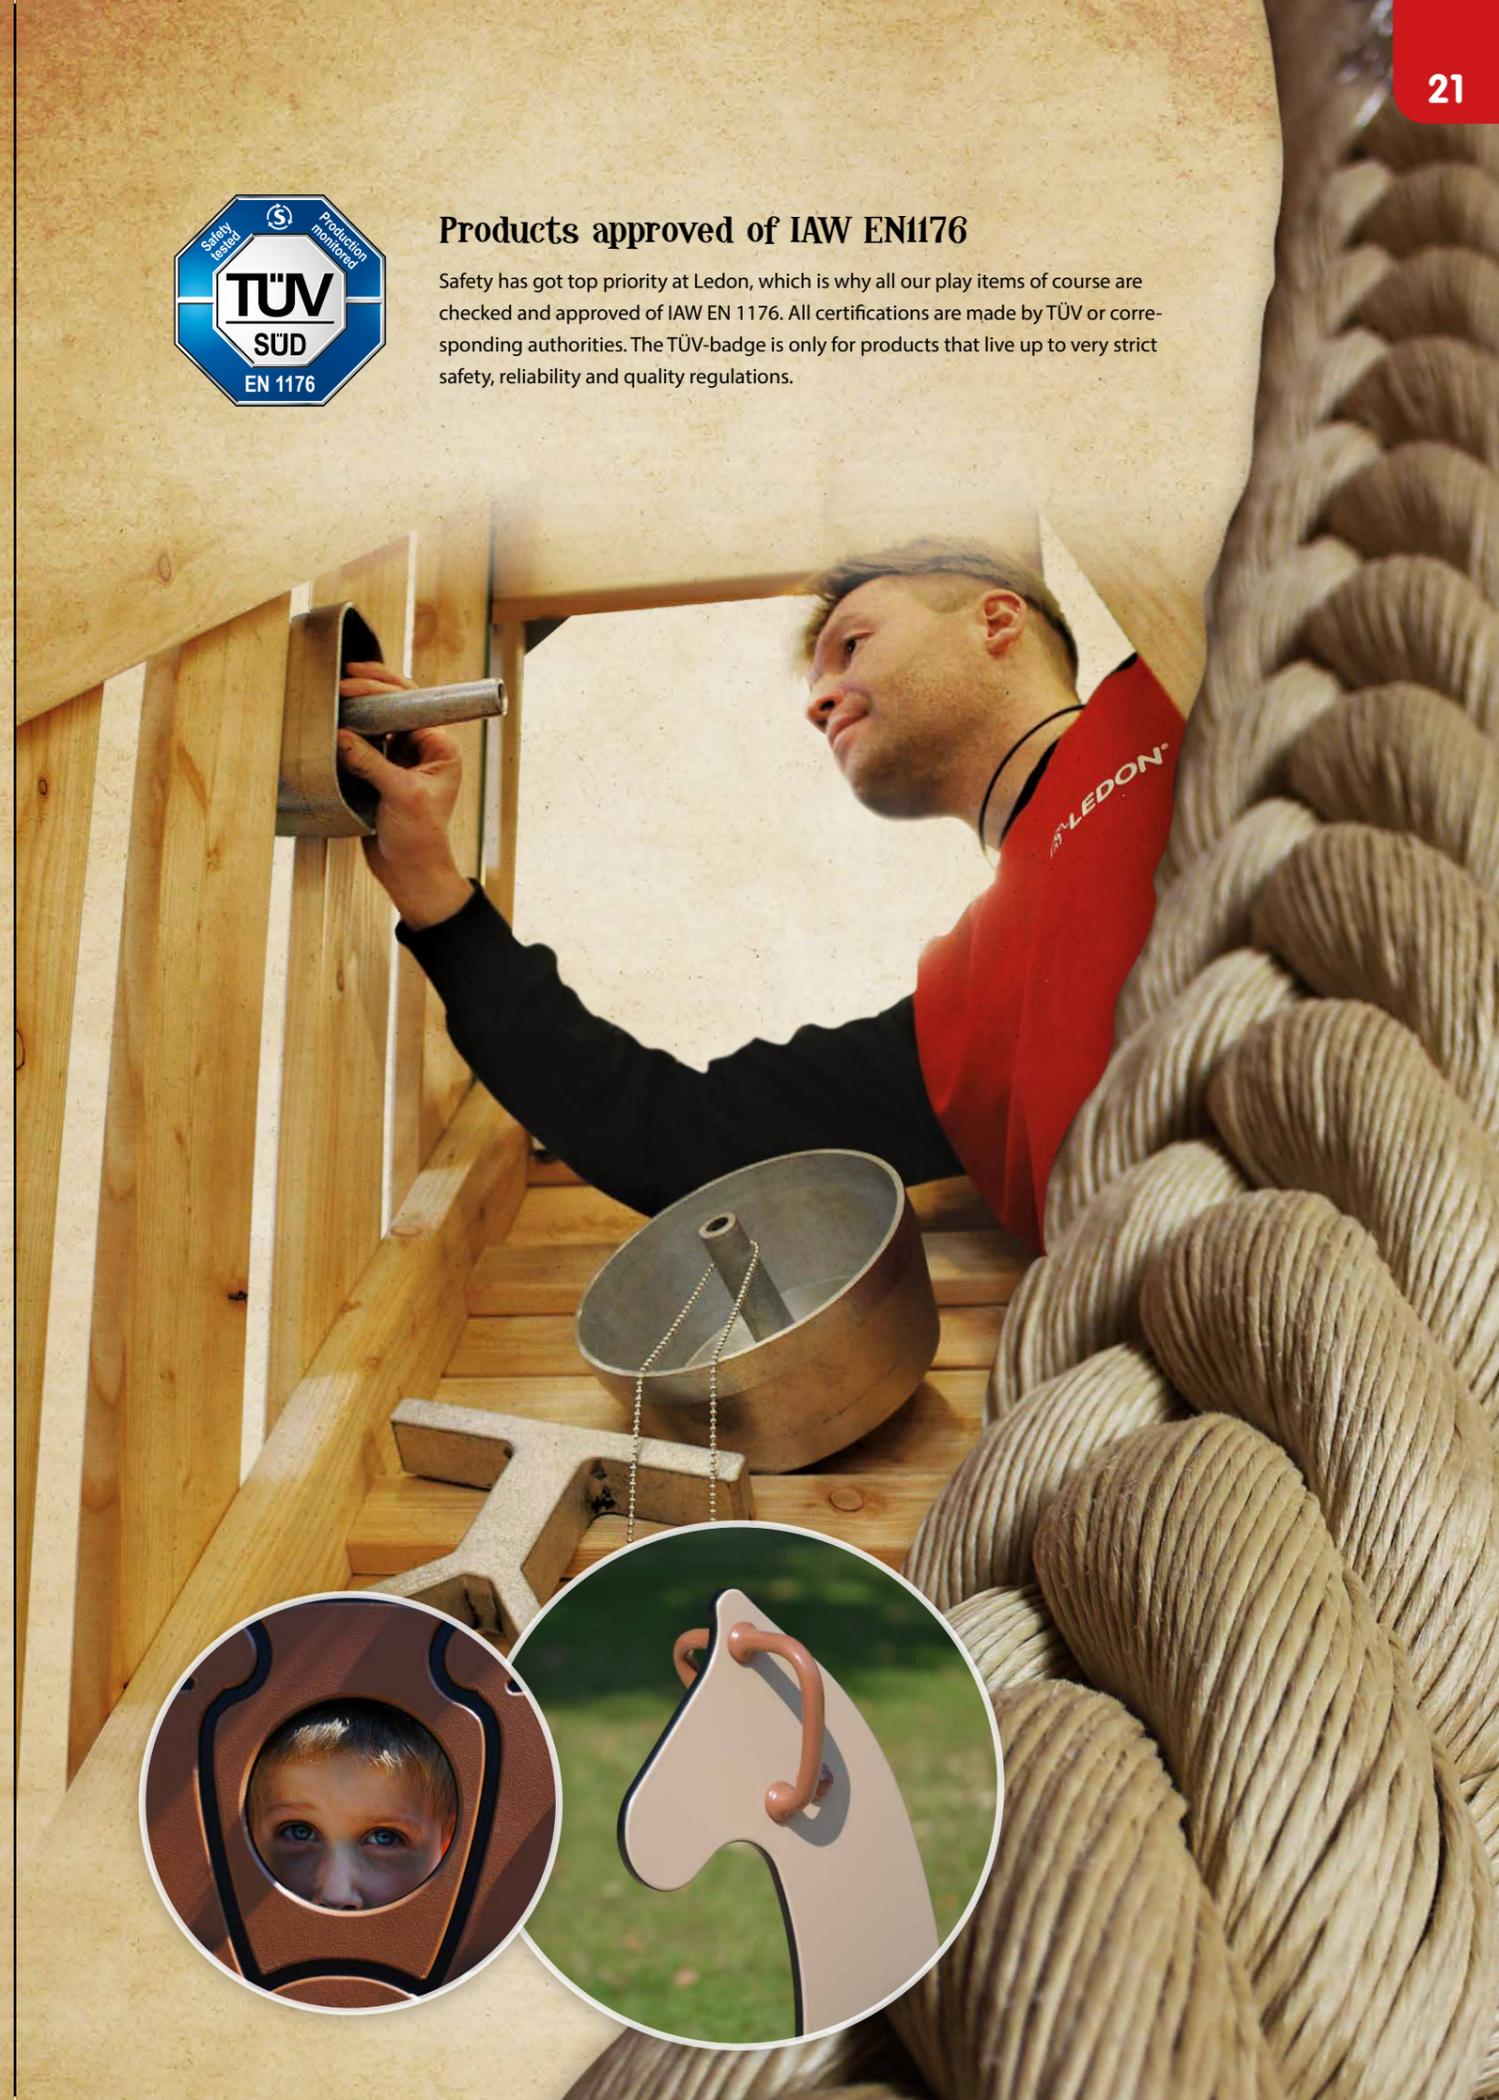

Changes in the material that only alter the product's appearance – such as changes in colour (Plastic and wooden parts) and shrinkage cracks in wood – are not covered by the warranty. However, we give 5 years warranty on considerable fading of HDPE board parts.

Products that are occasionally exposed to chlorine, sand or salt spray, are not covered by Ledon's warranty against corrosion.

Products approved of IAW EN1176

Safety has got top priority at Ledon, which is why all our play items of course are checked and approved of IAW EN 1176. All certifications are made by TÜV or corresponding authorities. The TÜV-badge is only for products that live up to very strict safety, reliability and quality regulations.

Why choose Ledon?

Development through play

One of the best things about being a child is that you learn as you play – without even knowing it. Children develop as they play – both physically and mentally. We focus a lot on motoric challenges because we know that the children's motoric development is vital for their motivation and their learning skills.

Play value

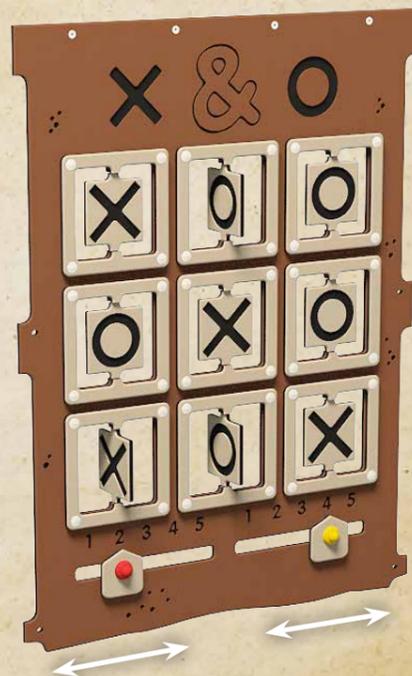

Playground equipment with high play value means that it challenges children according to their age and maturity, and that children continue to have fun playing with it. We make playgrounds appealing and exciting, thus stimulating the children's imagination and strengthening their physical and mental development.

Quality and safety

Quality and safety are our top priorities. All our products are maintenance-free and in accordance with EN 1176. We use FSC-certified wood only.

Experience and know-how

At Ledon, we have more than 45 years of experience with playground equipment and playgrounds. We have experts for all questions – ready to help you. That way, you can be sure to get the best solution when choosing Ledon.

We help you all the way

At Ledon, you come first. Our competent staff have got many years of experience and are ready to find the best solution for you – they will advise you, help placing your order and set up your playground.

Advice

There are so many things to be considered when planning on purchasing new playground items. Which items match your needs, how much space and what safety surface is required etc. We help you find the solution perfectly matching your wishes, your funds and your space.

Playground design

It can be difficult to imagine exactly what your new playground will look like. At Ledon, we will make a 3D draft and an outline for your whole new play area or for improving an existing play area. Ledon always outlines playgrounds considering the target group's age, your funds and surroundings.

Project approval

After reviewing the draft and the quotation and possibly after adding or altering things, the project is ready to be approved. As soon as you approve, we will start producing, and you can expect to receive your new playground within 3-4 weeks. The children will already be looking forward to it!

Assembly and safety check

All products come with assembly instructions, so you can assemble everything yourself if you wish. The assembly instructions show you how easy it actually is to set everything up. In the end, the finished playground is approved and you get your outlines, instructions and certificates (optional).

We take pleasure in our work...

**...and have done
so for more than
45 years!**

**At Ledon, we have been engaged in
play, development and safety for
more than 45 years.**

We are a Danish company placed in the southern part of Jutland, and we produce competitive playground items of high quality and durability.

All our playground items are controlled and certified IAW EN 1176 by TÜV or a correspondent authority.

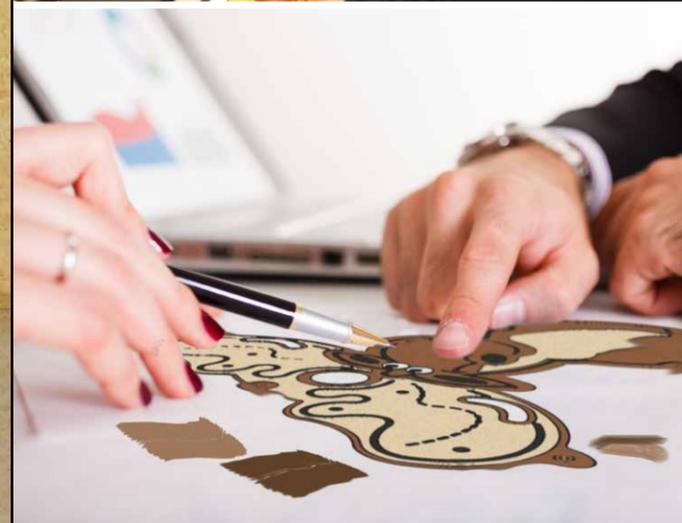

Development - that's us

We use modern production technology to maximize quality and homogeneity. Our many years of experience are alpha and omega when developing new innovative playground items, and we constantly optimize our product range. That way, you can be sure to get the best solutions regarding quality, technique and play value.

Product development

Children's play and development has for more than 40 years been in the focus for Ledon's innovative product development. We are always up to date with the latest knowledge on physical-, motoric-, language- and social skills, which is why our playground items cater for thousands of hours of play and learning.

Technical groundwork and CNC cutters

All our products are developed by using modern, technological drawing programmes and are then produced directly on our CNC cutters. That way, we save both time and resources – and can guarantee precision to the millimetre. Thanks to our CNC cutters, we are able to deliver standard products within 3-4 weeks – and we can fulfil special wishes.

Logistics and stock management

Ledon's playground items are packed in an efficient and resource-conserving manner. Many of our products are designed to fit on one pallet or to be delivered in pre-assembled components. That reduces transport damages and minimizes shipping costs. Furthermore, pre-assembled products and components make it easier for you to set up your new playground.

LEDON
EXPLORE

Play structures

Floor height 90 & 140 cm

Ledon Explore for the youngest focuses on creating an environment that allows children to become familiar with their bodies. Physical activity is crucial for the development of basic motor function, and it helps children learn about the body's different functions.

The structure offers countless hours of playing – e.g. role plays that help children learn to negotiate, to come to agreements and to deal with minor conflicts. This world has got a lot to offer for everyone: slides, rope bridges, activity boards, lookouts, splash tables and much more.

LEDON
EXPLORE

Play structures

Floor height 140 & 190 cm

Ledon Explore for the 3 to 7 year olds offers activities that invite to numerous hours of quality play. Children develop a great deal between 3 and 7 years of age, which is why we supply the structures for this age group with an extra wide variety of activities.

Several items like e.g. the kitchen, the stove and the kiosk, prompt role and group plays. The children will re-enact different situations, they will examine and test their limits – which is a healthy and important part of their development. Role plays also stimulate language development and train social skills.

The structures come with the children's favourites – rope bridges, jungle huts, slides, lookout barrels, tube slides and last, but not least, rope tunnels.

Play structures

Floor height 190 cm

The Ledon Explore world for 5 to 12 year olds offers a variety of playground structures with challenges for both climbers and runners. These structures focus on challenging physical activity – and even some competition! The structures are also good for playing “The floor is made of lava” or catch.

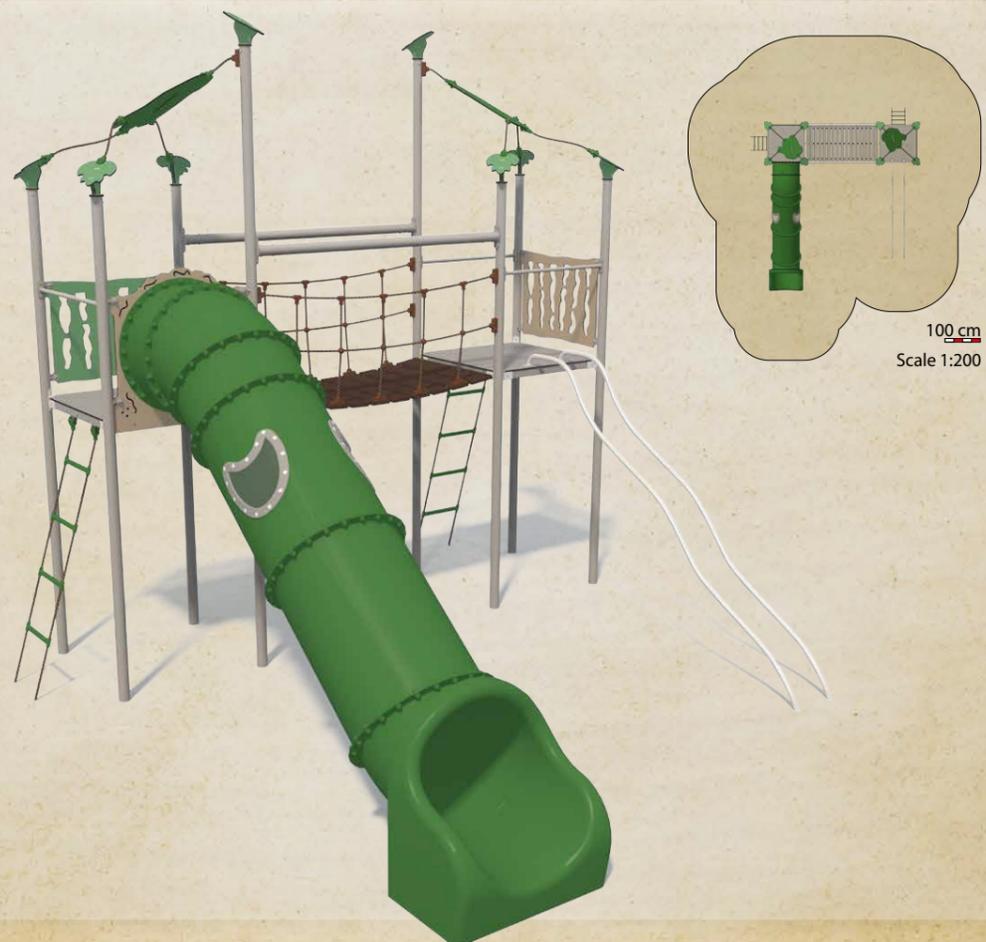

The options are countless. The structures come with big tube slides, rope bridges, fireman poles, rope tunnels, climbing nets, lianas, jungle huts and much more.

Climbing nets

Ledon Explore offers many different kinds of climbing nets. Some of them are integrated in existing structures, some are made for passionate climbers.

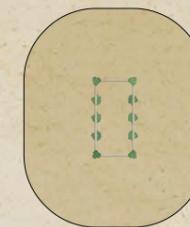

Climbing nets are popular with children of all ages. Climbing nets are not only fun – they are healthy, too. Climbing trains the major muscle groups, the motor system and certainly also the sense of balance. To get from one position to the next, the children have to move their limbs crosswise, which helps train the interaction between the two brain hemispheres. This kind of brain exercise will help them learning to read and to do sums. But there also has to be time to relax. The horizontal climbing nets are perfect for doing nothing and just hanging out with friends.

Ledon's climbing nets are made of strong rope with a steel core. That makes them vandalism-safe and the whole construction enormously strong.

Playhouses

Ledon Explore playhouses are equipped with plenty of activities like sand machines, splash tables, bird's nests, kitchens, kiosks and much more. Some of our models are a combination of several houses. These come in very handy with institutions that need playhouses big enough for a larger number of children aged 1 to 4.

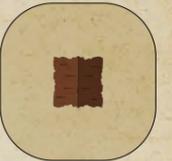

The playground is one of the first places for children to meet new friends. Playhouses on a playground are very often the best place for role plays, which are very important for the children's development. Children learn something about social rules, about compromising, negotiating and dealing with conflicts. Role plays require cooperation and communication, which is why playhouses support the children's creative and language development.

Activity corners and partition panels

We have designed several different activity panels for Ledon Explore. Combine them as you like – there are countless options, and we can even tailor the panels according to your wishes and needs.

If you would like to create smaller rooms on the playground or in the sandbox, you might want to do that using our activity panels as partition walls. You can also use them to connect two or more playhouses.

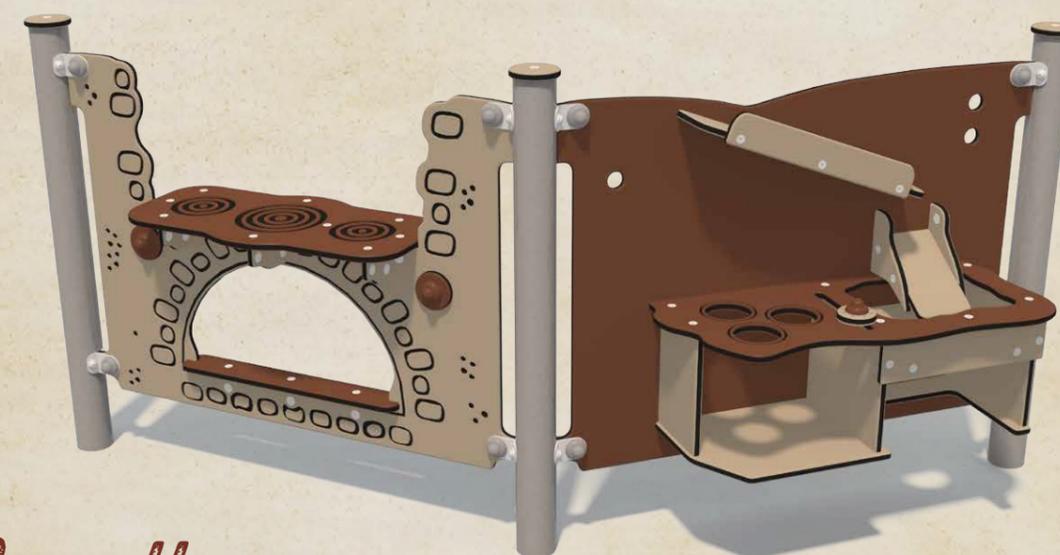

Among the activities are a kitchen, a stove and a kiosk. This is stimulation for both eye-hand coordination, fine motor skills and language as well as motor development – all essential elements in the children's general development. E.g. are eye-hand and inter-limb coordination vital for learning to read and write.

Swings

Ledon Explore offers many different swings – you will find anything from module-based swing frames and tire swing seats to wonderful bird's nests. Fun guaranteed!

Swinging is not only fun, it also develops the children's sense of balance and is a good basis for their motor development, which is essential for concentration and learning aptitude. But also mental and social skills are at stake. A child that finds it difficult to keep its balance, might feel self-conscious and avoid new motor challenges – which again might lead to dropping behind socially as well.

The frames can be equipped with a tyre seat, bird's nest or safety seat, and the chains are covered with plastic hose, to avoid small fingers freezing to them.

Springers and seasaws

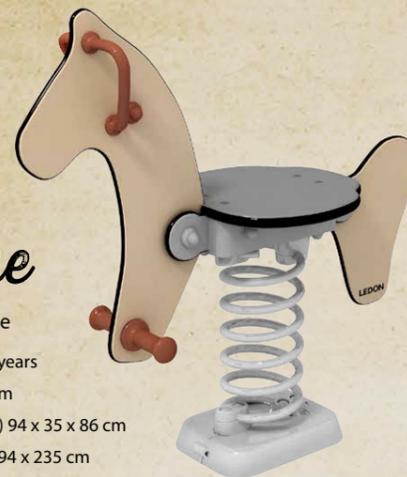

Ledon Explore springers tolerate even the wildest Indians or hunters! There are springers for both tall and small, so don't worry: All children will experience the thrill!

Rocking is fun, but also very important. To get and keep a springer going, you need to activate your whole body. That is physically healthy, but also good for your body perception. Rocking back and forth gives children a distinct sense for cause and effect, while at the same time stimulating their bony labyrinth, which again strengthens balance and learning skills. All Ledon Explore springers are 100% maintenance-free. Their seats are made of splinter-proof poly-ethylene and coated with skid-proof rubber – so the children can just push it! Ergonomic nylon handles reduce the risk of eye and dental injuries, while small fingers won't freeze to them.
