TREE TOWER 80-2

195x387 h161 cm

495x725 cm

6

2 - 5

H. C. 80

Inclusive playground designed for outdoor use of toddlers and for the inclusive play. The access, which leads over a triangular platform, complies with the European inclusive play standards. The platform of the tower is placed at 80 cm from the ground, has a large surface area of 1.6 square meters allowing 4-6 children to play at the same time. The polyethylene slide is composed of two side by side tracks that allow playing together and inclusion of children. The trunk section is made of laminated wood 18x50 cm with 9 cm thick branches. Ground connection by a galvanized steel bracket which keeps the timber lifted off the ground. The raised platform is composed of laminated beams section 9x9 cm and 3.5 cm thick planks. The panels that make up the crown are made of laminated wood thickness 27 mm with decorations and windows. The colour of the game is specifically designed to be inserted correctly into the natural areas of public parks, schools and parks.

All wooden parts are made of FSC-PEFC certified wood, treated under pressure in accordance to the EN 351 standards with UV protection.

Complies to EN 1176 (European Standard for Playgrounds Equipment and Surfacing).

Inclusive game that meets the guidelines of the European project Play For All. This game facilitates the first movements of young children or children with special difficulties. Climbing a tree is one of the most coveted goals of all children. The large play surfaces are easily accessible even by users with limited motor and visual abilities. The slide includes two side-by-side tracks that allow for the inclusion and sharing of the fun descent phase, by users with different abilities.
